Research Interests

I am passionate about understanding how modern climate models represent the climate system. My research ranges from investigating synoptic-scale atmospheric blocking and associated extreme events in climate models and observations, to assessing global climate model performance, and addressing questions of climate model dependence and its implications. I work with climate models, such as CESM2, and I am an expert in processing and analysing climate model data from projects such as CMIP. I have published several code repositories and I am enthusiastic about all aspects of open science. My work also includes teaching, supervision, project coordination, and public outreach.
